

Numerical analysis for the stochastic Cahn-Hilliard equation near the sharp interface limit

Dimitra Antonopoulou¹, Lubomir Banas², Andreas Prohl³

SUMMARY

In the deterministic setting, level surfaces of solutions of the Cahn-Hilliard equation are known to converge to the Hele-Shaw problem. I discuss a related question in the stochastic context, and propose related numerical and computational results, evidencing the role of noise on the geometric evolution.

Keywords: geometric (S)PDE, numerical analysis, simulation
